100%
BRITISH
MADE

EXTREME

Sleeping mat designed for performance and reliability. The precise balance of weight reduction, comfort and warmth.

This range focuses on the specific requirements of unsupported expeditions.

TEMPERATURE RANGE -60°C to +60°C

100% British manufactured, premium quality, physically cross-linked polyolefin foam. Using soft strong EVA foam for a compact, reliable mat with extra durability.

Gary Rolfe has been a user of 33 DDP's outdoor and survival gear developed in Canadian Arctic camps with dogs. His products have experienced a peak temperature range of 81°C (30°C above 10.5) C.

In summer my dogs and I enjoy handcrafted rears, comfort bear and heat with wolf packs. Wildlife here tends to eat what it pleases, including human beings. In perpetual polar waters it's cold enough to kill an adult. Brutal cold has a tendency to kill. In a tent I want sleep. I want insulation. I want warmth. I am demanding and use only gear that tolerates the harsher winter upon it. Multimat do all this.
